Senate, Still Dry, Votes to Put Sharper Teeth in the Prohibition Law.

By EDWARD W. PICKARD.
THAT the senate is still overwhelmingly "dry" was fully demonstrated last week when the Jones bill to get more teeth in the prohibition act came to a vote. The measure was passed by a vote of 85 to 15 while, in the senate private gallery, the republican party, led by Sen. Charles T. McNary, general secretary of the national conference of temperance, prohibition and public morals, and Rev. Edwin C. Dwyer, president of the national conference of dry organizations, were seen cheering the passage of the bill.

As passed, the bill increases the maximum penalties for illegal manufacture, sale, transportation of intoxicating liquor to imprisonment for five years or a fine of \$20,000 or both. A measure was pending in the house, having been favorably reported by the judiciary committee.

Passage of the Jones bill was preceded by a debate that drew crowds to the senate chamber, for the leading speakers were Sen. Borah of Idaho, respectively against, and Sen. McNary of Oregon, in support, of the bill. McNary's speech, which lasted for two days, was probably his last important effort in the senate, for he retired on March 4, and it was well worth hearing or reading. McNary's speech was a masterpiece of oratory, and it was well worth hearing or reading. McNary's speech was a masterpiece of oratory, and it was well worth hearing or reading.

COSMIC RAY FINDS RADIUM IN ASHES

Millikan Machine Picks It Out of Last Barrel.

Pasadena, Calif.—When one of Dr. Robert A. Millikan's electroscopes, developed in connection with his cosmic ray experiments, was enlisted as a detector, a problem as difficult as "looking for a needle in a haystack" was solved within two hours.

Through the use of the delicate instrument \$400 worth of radium which was accidentally thrown out with some ashes at the Pasadena hospital was recovered.

California Institute of Technology technician, was sent to the hospital with one of the cosmic ray machines and, after barrel after barrel of ashes had been brought in front of the electroscopes the instrument indicated that radium was present in the last barrel.

While hospital officials anxiously watched the proceedings in the basement of the institution the barrel containing the radium was filled with fifty milligrams of the most precious substance in the world, and it was only when the barrel was opened that the radium was discovered in the last barrel.

The electroscopes, it was stated, picked up the radium emissions, being so sensitive that it could detect a single atom of radium. The radium was found in a barrel of ashes that had been brought in from a patient's room.

Modern Marshmallows

WHEN you look at it, doesn't it seem a queer name for a dairy and candy product? Yet it is a fact that marshmallows are made from a dairy product, and they are a candy product.

Marshmallows are made from a dairy product, and they are a candy product. They are made from a dairy product, and they are a candy product. They are made from a dairy product, and they are a candy product.
